github.com/LakshyaBadjatya | LinkedIn | Medium | Dev.to

OBJECTIVE

Self-driven Class 12 PCM student with a proven passion for software development, having independently built and shipped multiple production applications across web, mobile, and desktop platforms. Seeking admission to an international undergraduate program in Computer Science (Fall 2027) to formalize my technical foundation and contribute to innovative solutions on a global stage.

EDUCATION

Senior Secondary (Class 12) - PCM Stream

Kota, Rajasthan, India | Expected 2027

Pursuing Physics, Chemistry, and Mathematics with a strong emphasis on analytical thinking and computational problem-solving. Preparing for IELTS examination.

TECHNICAL SKILLS

Languages:	Dart, JavaScript, TypeScript, C#, HTML5, CSS3
Mobile & Desktop:	Flutter (Android, iOS, Windows, macOS), Riverpod, Provider, GoRouter
Web Development:	React, Next.js, Node.js, Framer Motion, Tailwind CSS, SCSS
Backend & Database:	Firebase (Auth, Firestore, FCM, Storage), SQLite, JWT, BCrypt
Game Development:	Unity Engine, Game Physics & Mechanics
DevOps & Tools:	Git, GitHub, Codemagic CI/CD, VS Code, Figma, Postman, RCON

PROJECTS

Sambhav Services App - Business Management System

Flutter (Android + Windows Desktop), Firebase, Riverpod, GoRouter

- Engineered a full-featured cross-platform business management system with staff management, client tracking, invoice/bill management, cash accounting, and task reminders.
- Implemented role-based access control (Admin vs. Staff), real-time notifications, and a custom neumorphic UI widget library with 12+ reusable components.
- Built invoice lifecycle tracking (New > Packed > Delivered) with timeline history, cash book with running balance, and a 3-hour edit rule for staff entries. Codebase spans 138 Dart files.
- Features transport/courier company management, priority-based task reminders (Normal/Urgent), and persistent dark/light theme support.

SamTechy - Enterprise Field Service Management App

Flutter (Android, iOS, Windows, macOS), Firebase, Provider, FCM

- Built a comprehensive field service management platform with 5 distinct user roles (Super Admin, Admin, Engineer, Dealer, Customer), each with a custom dashboard.
- Features include engineer ticketing, job management, expense tracking with date-range filters, analytics dashboard, license key management (SaaS-style), and push notifications via FCM.
- Implemented encrypted data storage for sensitive information, organization management system, and client master data management with real-time sync.
- Deployed to Android and iOS with automated CI/CD pipelines using Codemagic. Supports desktop (Windows/macOS) from a single codebase with responsive layouts.

SELF-DIRECTED LEARNING & GROWTH

- **2020:** Received first personal computer during COVID-19; developed a deep curiosity for how software works.
- **2022:** Self-taught C# and Unity; completed first game project, learning programming logic hands-on.
- **2023:** Taught myself web development (HTML, CSS, JS) and Flutter; began building production applications.
- **2024-25:** Shipped multiple enterprise-grade applications across mobile, desktop, and web. Mastered React, Next.js, Flutter, Firebase, and TypeScript through real-world projects.
- Consistently dedicates 2-3 hours daily to coding, experimentation, and technical skill-building.

EXTRACURRICULAR ACTIVITIES

- **Badminton:** Regular player - uses sport to build discipline, focus, and a balanced routine.
- **Technical Writing:** Publishes articles on Medium and Dev.to to share learnings with the developer community.
- **Open Source:** All personal projects are publicly available on GitHub, reflecting a commitment to open collaboration and transparency.
